# EXTERIOR CLEANING

# ACTIVE FOAMS

## FORCE AND EFFECTIVENESS

Pre-washing allows removing superficial dirt, dust, road salt and slush, which could damage the paint during manual washing. The active foam technology softening the dirt and float it on the surface of the foam, which adheres exactly to the car body and penetrates deep into the crevices and nooks. Thanks to this, active foams can remove preliminary impurities without manual contact.

**AFC** - highly concentrated active foam with excellent washing properties. Perfectly dissolves and lifts dirt from the surface of the car body. It forms a dense, sticky foam, strongly adhering to the surface of the car body.

Recommended dilution - 1:10 (strong dirt);  
1:20 (moderate dirt)

**AFC PRO** - active foam for special tasks. The strong composition penetrates deeply into the dirt structure, dissolves them from the surface of the vehicle. The product creates a dense, sticky foam that provide strong activity. The product can be used for thorough cleaning of large-surface vehicles (semi-trailers, trucks).

Recommended dilution - 1:10 (thorough washing); 1:20 (pre-washing)

**USE ONLY WITH PREASSURE CLEANER  
WITH FOAMING HEAD!**

# SHAMPOOS

## STRENGHT AND SAFETY

Basic washing allows you to remove all mobile dirt that remain after washing with active foam. The composition of shampoos guarantees the dissolution of stubborn dirt, and at the same time does not affect the quality of the car paint. The concentrated composition ensures high efficiency and excellent value for money.

**CS** - efficient shampoo that perfectly removes all impurities. The rich composition guarantees easy cleaning and reducing the formation of streaks. The shampoo generate strong foam and has a pleasant scent, making working with it a pure pleasure.

Recommended dilution - 1: 100 (strong dirt); 1: 150 (daily care)

**CS WAX** - 2in1 shampoo. In addition to the cleansing ingredients, it contains waxing and caring compositions based on synthetic waxes that form a protective layer that gives a perfect gloss and a hydrophobic effect on the cleaned surfaces. An excellent product for people who regularly wash their cars and who value immediate effect.

Recommended dilution - 1: 100 (strong dirt); 1: 150 (daily care)

**USE FOR WASHING  
WITH 'TWO BUCKETS'  
METHOD**

**USE AFTER  
PRE-WASHING  
WITH ACTIVE FOAM**

# WHEEL CLEANING

## SPEED AND EFFICIENCY

Car wheels are elements most exposed to heavy soiling due to operating conditions. Dust, mud, fluids, bituminous deposits, brake dust and road salt are everyday enemies of clean and shiny rims that can easily be won thanks to the efficient ITP-System products.

**WHEEL CLEANER** - a strong, alkaline agent for thorough cleaning of all types of car rims. The highly concentrated product composition uncompromisingly removes all kinds of dirt, rust and dust from brake pads. The product perfectly dissolves the seized dirt and can also be used to clean the tires. Product for direct use by spraying.

**VAMPIRE CLEANER** - product with neutral pH for deironisation of rims and other metal elements. The modern composition of the product ensures the dissolving of rust and brake dust from rims, tires and any other surfaces exposed to rust, including tools or workshop surfaces. The product binds with dirt of metallic origin and creates red-violet streams, giving the effect of "bleeding" indicating the removal of sediments. Thanks to the high quality ingredients, the product has a pleasant, citrus scent.

**PRODUCTS ARE COMPATIBLE WITH EACH RIMS TYPES:  
ALUMINUM, STEEL AND LACQUERED**

# CLAYING

## ACCURACY AND PRECISION

Car body claying safely remove the most of stubborn dirt from the surface - asphalt and resin from trees. The use of clays with lubricant completely eliminates dirt, removing their residues from the paint pores, which is of great importance before the application of protective coatings.

**NANOCLAY PRO** - innovative detailing clay created for thorough cleaning of car body. Clay contain titanium and silicon nanocompounds, thanks to which it removes dirt at the molecular level. Thinking about professionals, the ITP-System lab created 3 clay grades depending on the type of car paint and the requirements of the detailers. In contrast to commonly available clays, **NANOCLAY PRO** has a pleasant, fruity fragrance, thanks to which working with it is pure pleasure!

**AVAILABLE 3 CLAY GRADATIONS: SOFT, STANDARD AND STRONG ALLOWS FOR FULL DETAILING OF ANY TYPE OF CAR PAINT!**

**CLAY LUBE** - lubricant for detailing clay providing excellent slip and reducing the risk of scratches to a minimum. The product further softens the dirt and makes it easier to remove them from the surface of the car body. The product facilitates the handling of clay and has a pleasant scent. Product for direct use.

# SPECIAL PRODUCTS

## CHEMICALS FOR SPECIAL TASKS

The variety of surfaces occurs in vehicles requires the use of specialized products that allow them to be kept perfectly clean. The ITP-System laboratory, based on the latest achievements in chemistry, has created a full range of products to thoroughly clean all nooks and crannies.

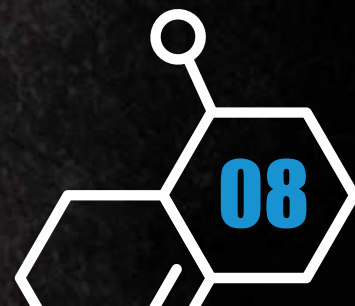

**RAPID** - a powerful product for removing greasy stains. Thanks to the quick action, no harmfulness for rubber and plastic elements, it allows you to clean the engine and mechanical components of vehicles. In a short time, it dissolves and removes dirt containing operating fluids as well as greasy and oily substances.

**DEC** - extremely effective product that emulsifying the most stubborn dirt, including asphalt, bituminous deposits, resin, glue and insects. It removes stubborn dirt without intensive scrubbing.

**ALU CLEANER** - an excellent cleaner for aluminum parts. The rich composition allows quickly removing dirt from aluminum alloys. The content of substances with the ability to whiten aluminum allows to remove the oxidation layer and restores the perfect appearance to all aluminium parts.

# SPECIAL PRODUCTS

## CHEMICALS FOR SPECIAL TASKS

**WAX REMOVER** - highly active product for emulsifying a layer of waxes on the surface of the car body. It allows to completely remove wax and substances similar to waxes before coatings regeneration or reapplication. The use of this product is mandatory before the application of ceramic, polymer or wax coatings. Thanks to this, the used coating will gain full durability and efficiency.

**IPA** - solvent solution based on isopropyl alcohol. Due to the excellent degreasing properties, it is recommended to rub the car body surface just before coating application. Thanks to this, any residue of cleaning agents, delicate dust, dust and residual waxes will not be a problem. The thin product layer evaporates in a few seconds without leaving streaks or stains.

**WATERLESS SHAPOO** - a unique product for the waterless car body wash. An invaluable product for quick refreshing of vehicles at events, in car showrooms, shows or during trips. Allows you to remove mild dirt in a few moments, leaving a clean and shiny surface.

**SPRAY 'WATERLESS SHAMPOO' ON THE car BODY AND COLLECT THE DIRT IN ONE DIRECTION. DO NOT USE FOR A STRONG DIRT!**

# SPECIAL PRODUCTS

## CHEMICALS FOR SPECIAL TASKS

**GRAFITTI CLEANER** - unique product for removing graffiti from the surface of car bodies and car windows. The product contains high concentration of natural plant extracts that deeply penetrate paint structure and causes swelling. The product partially dissolves in water, so you can easily wash away paint and product residues. The agent is completely harmless to car paint, tires, plastics, chromes and other external surfaces. In addition, in contrast to standard solvents, the product is completely non-flammable and does not have a unpleasant smell, which guarantees unprecedented safety. Residues of the product are fully biodegradable!

# INTERIOR CLEANING

# INTERIOR CLEANING

## SAFETY AND EFFECTIVENESS

**APC** - universal cleaning agent for external and internal surfaces. Ideal for cleaning plastics, upholstery material, external parts and eco-leather. The advanced formula, thanks to strong cleaning ingredients, quickly dissolves dirt, removes stains and discoloration, leaving no streaks or streaks. The product is completely safe for cleaned surfaces.

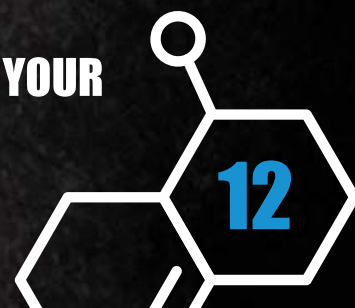

**SHINE** - agent for smudges-free cleaning of windshields and mirrors. The advanced composition of the product guarantees excellent cleaning properties, thanks to which every glass surface will regain clarity and shine. The product contains an addition of antistatic agents so that the cleaned surfaces repels dust.

**LEATHER FOAM** - a product for thorough cleaning of leather, suede, eco-leather and nubuck. The rich composition guarantees excellent penetration into the depths of the impurities and their dissolution, and then lifting on the surface of the foam. The product does not dry the leather and does not cause it to crack.

**ADVANCED PRODUCTS COMPOSITION SAVING YOUR TIME REQUIRED TO OBTAIN PERFECT CLEAN!**

# WAXING

# WAXING

## PROTECTION AND EXCELLENT GLOSS

Waxing allows you to protect and refresh the car's body. Properly applied wax guarantees excellent water beading, protects against harmful substances (bird droppings, acid rains, road salt) and significantly facilitates cleaning. Waxes bring out the color, improve the texture of the car body and give it a perfect shine. The chemical innovations allowed us to obtain a full range of polishing waxes - from natural to synthetic products, and completely eliminate petroleum products from the composition.

**BEESWAX POLISH** - a product based on beeswax. The fully natural and biodegradable composition is perfect for car paints, giving shine and bringing out the depth of color.

**CARNAUBA WAX** - wax containing 30% of Carnauba. High hardness and excellent protective properties of this natural wax allowed to obtain a universal product, for all types of car paints. The product gives excellent glassiness and diamond shine.

**F-T SYNTHETIC WAX** - wax based on synthetic F-T waxes. High hardness and excellent resistance to chemicals, acid rains and road salt meet the highest standards of paint protection. Protected car body gets a high gloss and depth of color.

# WAXING

## PROTECTION AND EXCELLENT GLOSS

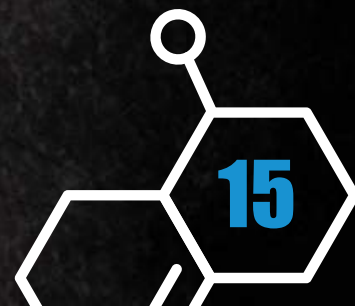

**HYBRID WAX POLISH** - hybrid wax containing natural, synthetic waxes and hydrophobic polymers. The universal composition allows you to achieve full protection on all external surfaces of the vehicle. The balanced composition guarantees simplicity of application, slip and gloss.

**COLOR WAX POLISH** - a hybrid wax created for enhancing the color of the car paint, extracting its depth and protects against the harmful effects of the environment. The composition of this wax is focuses on refreshing the clor from car body, masking the fine scratches and discoloration, and enhancing the gloss and protecting the pigments against UV radiation. Wax is available in many coloristic versions and can be strengthened with the addition of perlizers, giving a perfect strengthening of the shading effect in matelized car paints.

**WHEEL WAX** - efficient and durable wax for rims and metal or metallized elements. The product perfectly protects rims against road salt and makes it easier to keep them clean, reducing adhesion road dirt and dust from brake pads.

# COATINGS

# COATINGS

## DURABLE PROTECTION FOR YEARS

The new generation ceramic coating **OBSIDIAN 9H+** combines excellent protective properties with flexibility. Thanks to this the coating is not exposed to the formation of micro cracks caused by the thermal expansion of the car body, which works with temperature changes. The result is long-term protection of the car body from scratches, oxidation, corrosion, acid rains and chemicals. After applying to the surface, the coating undergoes full ceramization, creating a nanocomposite coating that combines the hardness of the quartz with the elasticity of the silicone, with a thickness not exceeding 5 micrometers.

COATING DURABILITY IS 3 YEARS WITH 1 LAYER, 5 YEARS WITH 2 LAYERS, AND 6 YEARS WITH 3 LAYERS!

COATING THICKNESS DOES NOT EXCEED 5 MICROMETERS, THANKS TO WHICH IT IS COMPLETELY INVISIBLE

THE COATING IS RESISTANT TO ROAD SALT, UV RADIATION, ACID RAINS, CHEMICAL AND PHYSICAL FACTORS AND CHANGES OF TEMPERATURES

HARDNESS OF COATING IN PENCIL SCALE EXCEEDS 9H. THE COAT EXHIBIT FLEXIBILITY AND EXPANDS WITH THE SURFACE

**OBSIDIAN TOP COAT** is a fully compatible external coating for car body protected with **OBSIDIAN 9H +** ceramic coating. With increasing ceramization, hardness and strength increase together with decreasing of hydrophobic properties. For achieving best hydrophobic effect, we recommend **OBSIDIAN TOP COAT**, to enjoy the perfect water perfection combined with protective properties of ceramics.

# COATINGS

## DURABLE PROTECTION FOR YEARS

Polymer coatings produced by us are characterized by an advanced composition, based on the achievements of nanotechnology. Small nanocompounds deeply penetrate the structure of the protected surface and create permanent, chemical connections that give long-term protection and resistance to a number of chemical and physical factors, as well as excellent hydrophobic and self-cleaning properties.

**ONYX** - excellent coating for glass, resistant to peeling and chemical agents. Its hydrophobic and oleophobic properties combined with the perfect water beading will give a new quality to the windshields of your car. The modern composition protects against smudging and guarantees fast application, and durability up to 18 months.

**ANTIFOG** - anti-fog coating. It perfectly covers surfaces of windows and mirrors and creates a layer limiting the settling of steam on a protected surface.

**DIAMOND PRO** - excellent, universal coating for protection of all external elements of the car (glass, mirrors, body, plastics). The advanced composition of the product allows you to protect the vehicle up to 12 months from application. Coating is easy during application and very efficient.

# COATINGS

## DURABLE PROTECTION FOR YEARS

**CARNAUBA QUICK DETAILER** - an efficient agent for quick refreshing and polishing of the car body. The carnauba wax contained in the product brings out the color and gives the shine, and the water formulation guarantees quick and easy application. Thanks to the novel composition, the product allows refreshing wax layers on the body, extending their durability.

**DIAMOND WAX** - polymer coating for fast hydrophobic protection. Application by spraying and polishing with microfiber cloth allows to achieve a perfect hydrophobic effect in a short time. The product is removable with shampoo, making it easy to replace with a different coating or wax.

**COBALT** - advanced protective coating for metal surfaces, especially for rims. Product strongly binds to the surface of the metal and creates chemical bonds that guarantee high durability. The coating facilitates cleaning, repels water and dirt, and protects against road salt.

**LEATHER** - hydrophobic leather coating. Deeply penetrates leather structure and creates a breathable layer that repels water and dirt. It is fully compatible with all leather types and does not cause drying.

# DRESSINGS & IMPREGNATES

# IMPREGNATY

## I DRESSINGI

**GLOSS** - perfect dressing for refreshing and protecting the dashboard and internal plastics. The innovative formula ensures perfect color extraction and gives satin gloss. The product is characterized by high efficiency and excellent protective properties.

**VINYL** - advanced impregnate for external plastics. The product strongly binds to the surface of the plastic, creates a durable coating that protects the vehicle from the adhesion of dust, dirt and road salt. The impregnation deepens the color and guarantees excellent water beading.

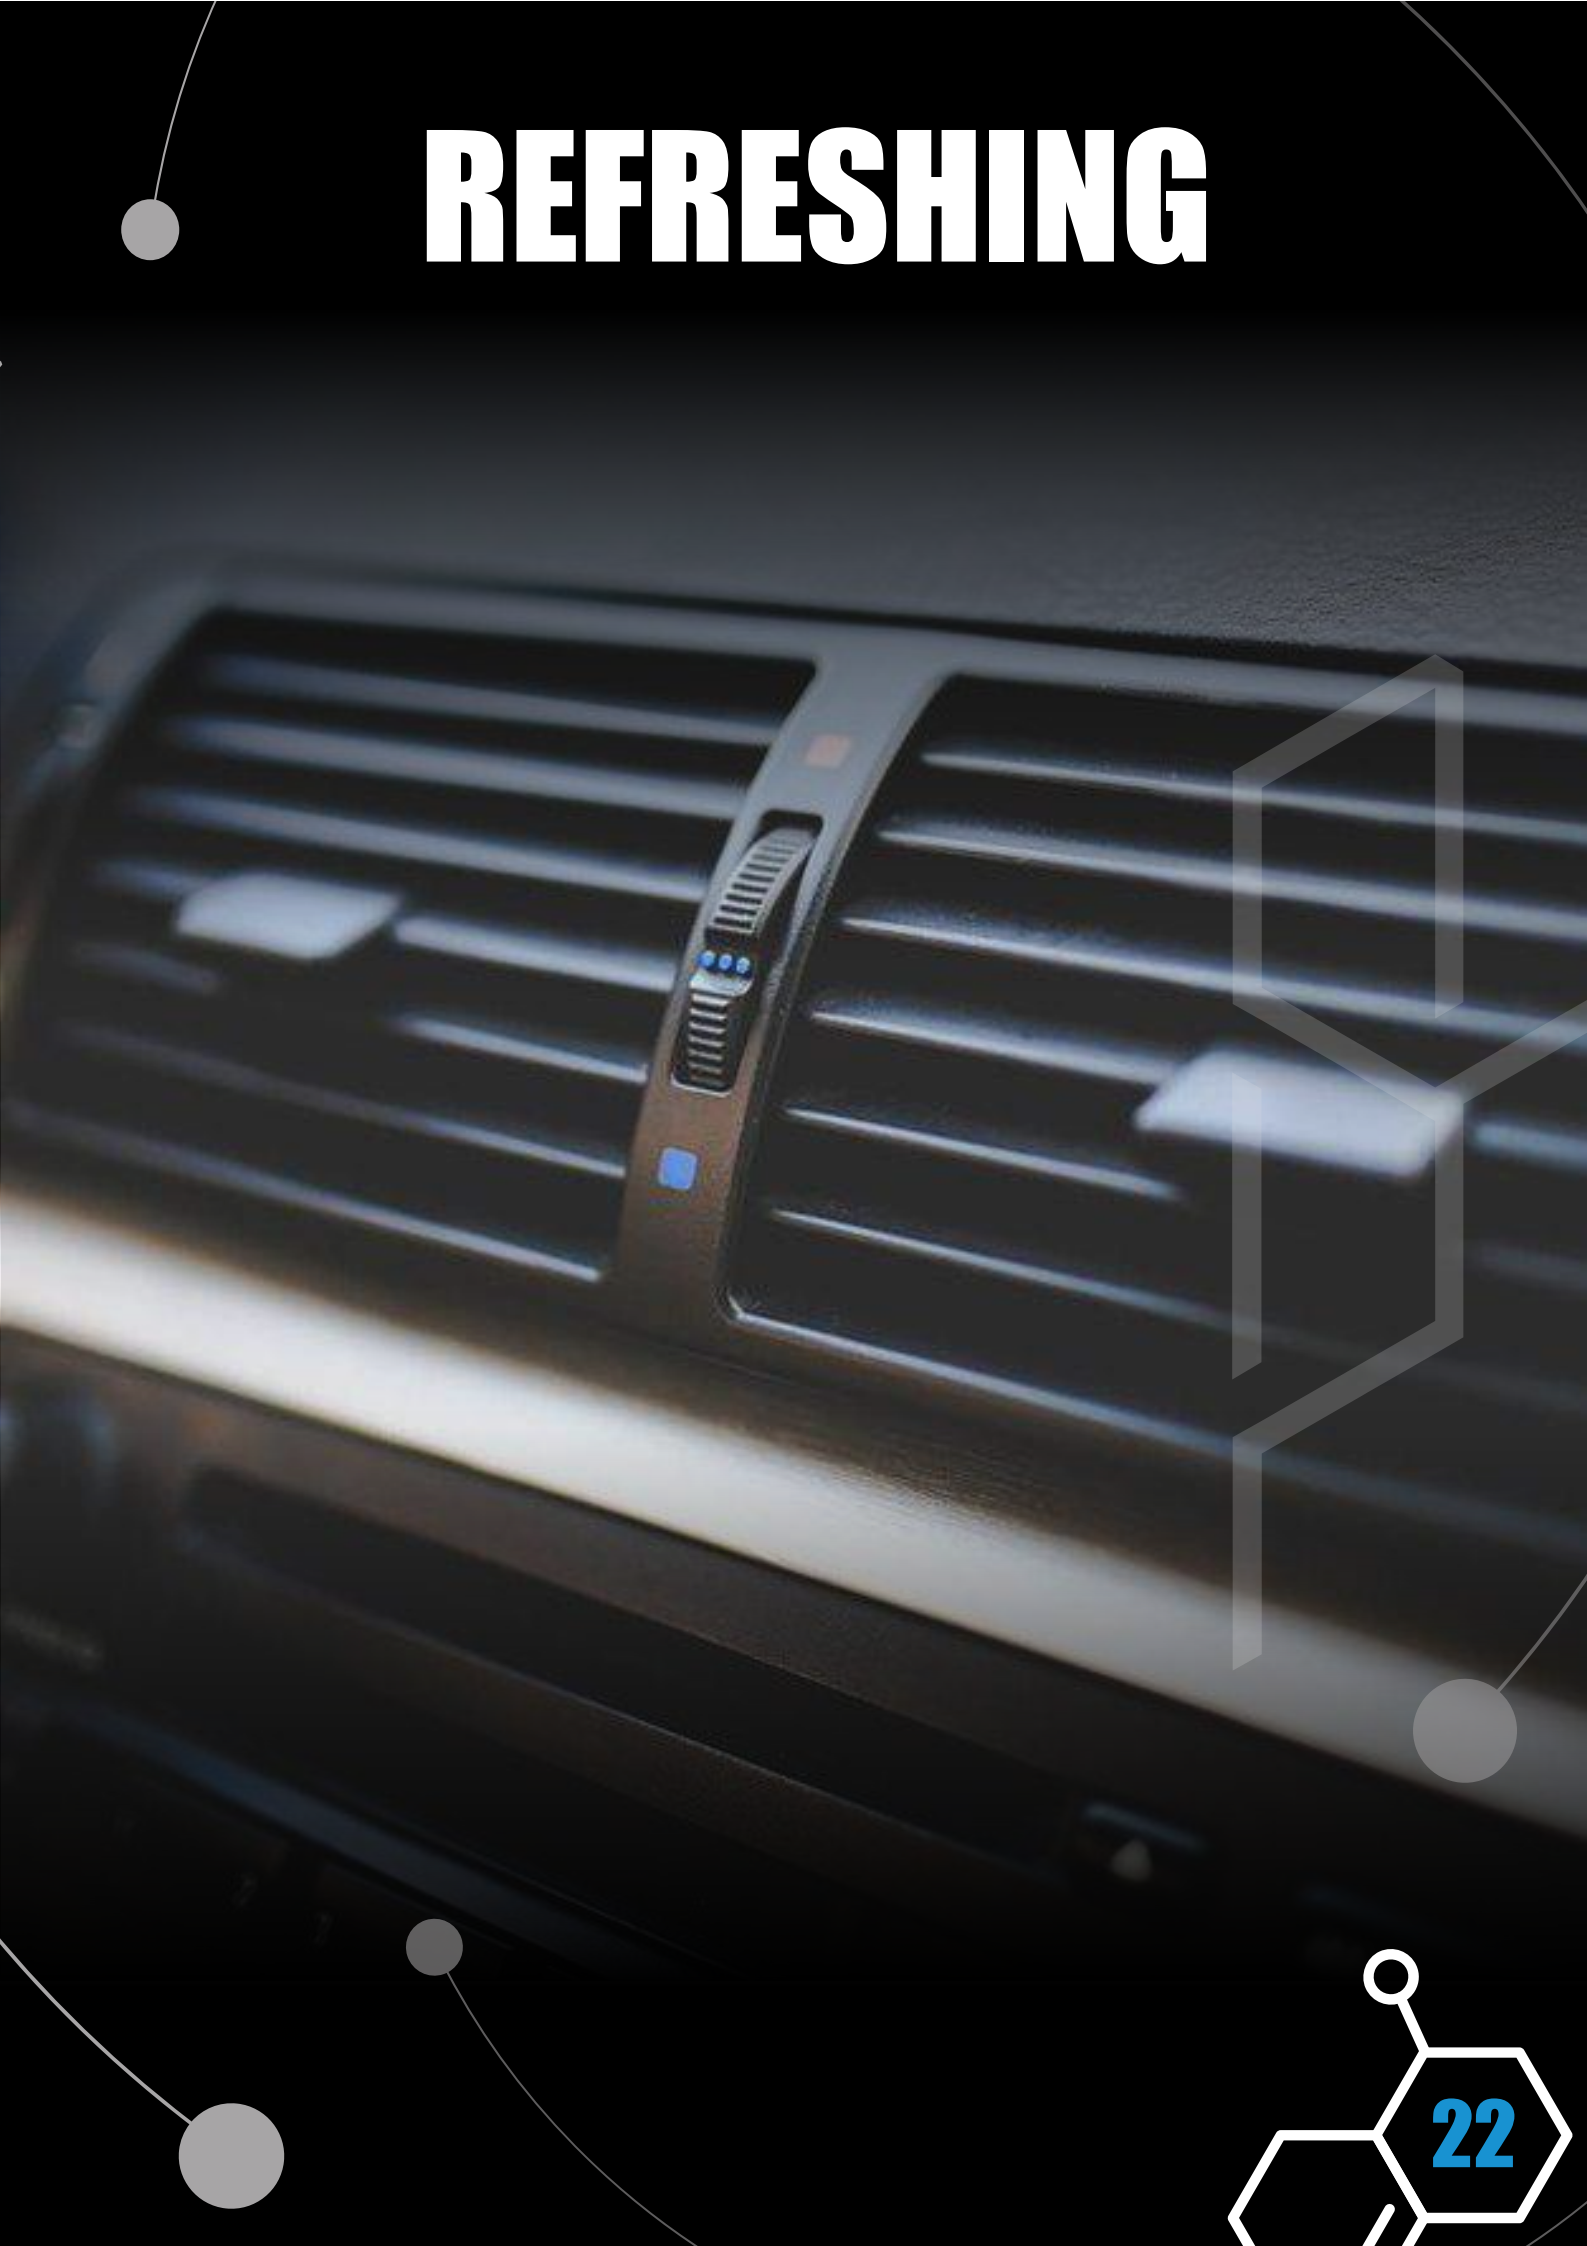

**TYRE** - efficient tire dressing. It is a mandatory product in every auto detailing. After application, it gives a deep, dark color and the effect of a wet wheel, and creates a protective layer that lengthens the effect and facilitates cleaning in the future.

**TYRE GEL** - dressing for tires in the form of a gel. The product perfectly protects and refreshes the tires, giving the excellent look with a light satin gloss.

# REFRESHING

# REFRESHING & DEODORIZATION

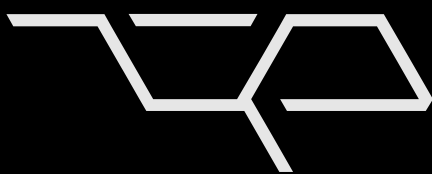

**CLI** - product for thorough cleaning of air-conditioning and ventilation systems. High content of active substances allows to remove the accumulated layer of dirt together with mildew and bacterias. The nanosilver content significantly extends the effect of cleanliness.

**FRESH** - product for refreshing and deodorising vehicles and rooms. The product contains a high content of nanosilver and absorbers of unpleasant odors based on zinc compounds. Thanks to this product application guarantees long-lasting refreshment and protects against return of unpleasant odor.

**SCENT** - perfect freshener with an intense fragrance. Highly concentrated fragrance compositions release over a long period of time, ensuring durable effect. The product is available in several variants of fragrances, so it always meets the tastes of final users.
